

10106 LEG LEVELER INSTRUCTIONS

CAUTION: Before using the Little Giant Leg Leveler, read these instructions as well as those found on the Leg Leveler. Improper use of the Leg Leveler might result in injury. Little Giant Ladder Systems assumes no liability for injury that may result from failure to follow these instructions. This leg leveler is only for use with the Classic, Alta-One, American Titan, Megalite, Pro Series, Super Duty and SkyScraper models.

1. To mount the Leg Leveler on your Little Giant Ladder, remove clamp from the H-Bracket.

2. Slide the H-bracket onto the outer ladder leg as close to the ladder foot as possible. Insert clamp into the H-bracket and securely tighten. If the angles are not the same, remove leg clamp and rotate the channel assembly 180 degrees, and then replace leg clamp.

3. To adjust the height, loosen the clamp; choose your desired height, and retighten the clamp with firm pressure. Make sure both clamps are tight and secure.

4. Ensure the ladder rungs are completely level. Adjust the Leg Leveler as needed to ensure correct vertical positioning.

LEG LEVELER ASSEMBLY

WARNING

When assembling your Leg Leveler, make sure the non-slip section of the beam assembly is placed on the flat side of the leg.
