Panasonic PTZ Installation Guide

The Digital Recorder COM2 connect to Kalatel KTD-312 interface module.

- A. Set the RS232 port of the KTD-312 to 9600 Baud, No parity, 8 data bits, 1 stop bit
- B. The RS-232 port of the Telexper machine is COM2.

So connect the RS-232 cable from the KTD-312 to COM2 of the Digital Recorder.

Note: the DB9 pin2 and pin3 must be swapped.

(RXD of KTD-312 connect to TXD of the Digital Recorder)

(TXD of KTD-312 connect to RXD of the Digital Recorder)

- C. Set the dome to ID= 0
- D. In the "LIVE" mode press the "right button" of the mouse then the PTZ control box will show up
select Site=0 monitor= 0
- E. Use the mouse to do your other selection.
- F. When you send command from the Telexper machine to the dome,
the LED on the top of the KTD-312 should flash to indicate transmission.
If no flash please check your cabling.
- G. If you see Led flash but PTZ does not works then please check the KTD-312 and the dome wire connectors.(Refer to Kalatel manual)

Troubleshooting of Kalatel Speed Dome

Checking List

1. KTD-312 Controller:

	<u>dipswitch</u>
Port Settings, 9600, n, 8, 1	bit 5 off
Computer Interface operation (Not data merger operation)	bit1, 2, 3 off
2. RS-232 to computer:
 - Port Default Settings 9600, n, 8, 1
 - Com1 for VSDR without phone line transmission (VSDR, VSNR)
 - Com2 for VSDR with phone line transmission (VSTC, VSNC), Com1 for modem
3. Camera (Dome Drive):
 - ID: Start from 0 ~ 511 (default is 0), They are 1 ~ 512 on VSDR control panel.
4. Matrix: (If available)
 - ID: Start from 0 ~ 63 (default is 0), They are 1 ~ 64 on VSDR control panel.

Diagnosis

1. Make sure the dome drive is set to ID 0.
2. Enter the live screen mode in Digital Recorder.
3. Click right mouse button on the VSDR live screen and the PTZ control panel is shown.
4. Select monitor 1 and camera 1 on the PTZ control panel.
5. Press Left arrow button on PTZ control panel.
6. The green LED of KTD-312 toggles every time a character is received by KTD-312 from the computer.
7. If the green LED works well, but the camera doesn't move, check the dome ID if correct.
8. If the green LED never flash,
 1. Check the Baudrate setting for KTD-312 if it is correct.
 2. Check the selection of digital recorder COM port if it is correct.
 3. Check the cable for connection if it is correct.

Instructions:

1. The default mapping of monitors and cameras are ordered.
 - Camera 1 map to monitor 1
 - Camera 2 map to monitor 2
 - Etc.
2. You can connect from the video outputs of cameras to the video inputs of digital recorder and up to eight or sixteen cameras at the same time.
3. Select a monitor number to control the desired camera from PTZ control panel or just left click the desired picture window from spot window mode.
 4. If the matrix is available, you may change the monitor and camera mapping.
